DiPel® DF achieves AgriQuality and BioGro Organic Status

Nufarm is pleased to announce that DiPel DF has received organic certification from AgriQuality and Bio-Gro.

Alan Cliffe, Nufarm's Technical Manager says, "This is good for the grower as it enables the product to be used in spray programmes with the knowledge that is completely organic. As far as I know, it's the only B.t formulation which has both AgriQuality and BioGro certification".

BioGro is New Zealand's leading organic certification agency, which helps access the best organic markets in the world. Like BioGro, AgriQuality is accredited under the IFOAM (International Federation of Organic Agriculture Movements) programme, which is a world-wide movement for organic agriculture promoting the principles of ecologically, socially and economically sound systems based on the principles of organic agriculture.

DiPel DF is an effective organic insecticide, for the control of caterpillars on fruit and vegetables including white butterfly and diamondback moth on brassicas and leafrollers on kiwifruit, grapes, citrus, berryfruit and avocados. DiPel DF is a dry flowable formulation that is available in 500g, 5kg and 50kg.
