

# BINDER

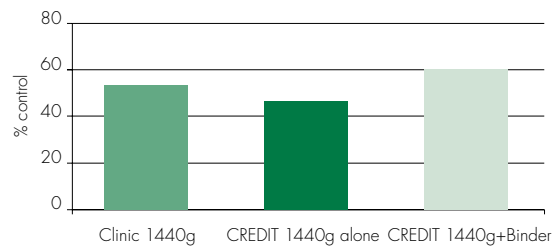

Binder is a tested mixture of adjuvants selected from over fifty candidates because of its performance against grass weeds.

### Strengths

- Improved robustness of activity when used at lower rates of glyphosate/per hectare
- Suited to control of grass weeds
- Improves rainfastness
- Ideally used when controlling grass weeds using low water volumes and rates of CREDIT

### Control of Couch in spring stubbles

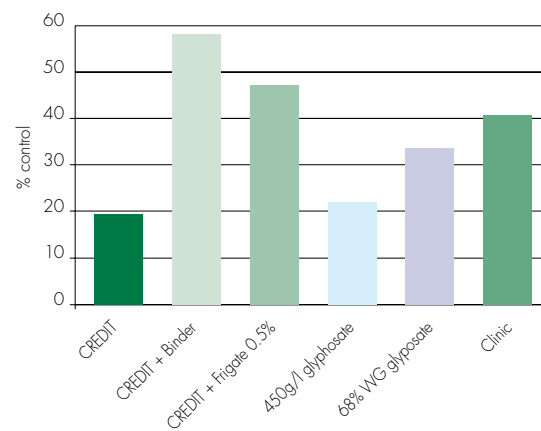

22 days after treatment (3 trials)

The graph shows the strength of Binder as an adjuvant against grass weeds. CREDIT and Binder significantly outperformed conventional 360 glyphosate.

### Rainfastness trial

% control of winter wheat 25 days after treatment

The graph shows results from a replicated greenhouse trial with a low dose of glyphosate with rain applied 30 minutes after application, demonstrating the rainfastness of Binder as an adjuvant.
