

Nufarm strengthens turf fungicide portfolio

Nufarm Ltd is proud to announce the registration of 3 key fungicides for professional turf: -

- Penncozeb 420 SC Fungicide
- Nufarm Unite 720 Fungicide
- Nufarm Throttle Fungicide

Penncozeb 420 SC is a 420 g/L liquid mancozeb formulation and offers key user benefits over other mancozeb formulations. It delivers key disease control at lower grams active rates and offers liquid convenience while still being cost effective.

Nufarm Unite 720 is a high quality 720 g/L chlorothalonil formulation, which is formulated and manufactured in Australia for Australian conditions. It comes in a convenient to use 10 L container and is registered to control, Dollar Spot, Brown Patch and Grey leaf spot.

Nufarm Throttle Fungicide contains the popular active, 250 g/L propiconazole, and offers cost effective control of Dollar Spot and Spring Dead Spot, and comes in either a 1, 5 or 20 L container.

Nufarm is committed to continue its support of the Turf Industry in Australia. The new registrations along with Nufarm's already established brands such as Roundup and Roundup Biactive, Kamba M, and Broadside Herbicides, along with our latest Turf Insecticide Nufarm Mallet, containing 200 g/L imidacloprid, all give cost effective pest control options to the turf industry.

Harry Pickering, Product Development Manager, Nufarm Specialty Products, says, “the 3 new registrations will strengthen the Nufarm Turf Portfolio offering and also come with the Nufarm guarantee and backing of our field personnel who are located throughout Australia”.

For more information on Penncozeb 420SC, Nufarm Unite 720 Fungicide or Nufarm Throttle Fungicide, talk to your local Turf specialist or go to www.nufarmspecialityproducts.com.au
