

Roundup DST rewriting the CT benchmark

Roundup® is one of the most recognised brands in Australian agriculture, providing a glyphosate solution for every operation. So with Nufarm's imminent launch of Roundup DST, now is time to ring in the changes with this new generation technology.

"Roundup CT was launched over 23 years ago, and has been a reliable and trusted performer for Australian farmers," said Damien Deckert, Nufarm's national business manager for Roundup and glyphosate.

"But now the goal posts are shifting again with Roundup CT's replacement in the introduction of Roundup DST – the first new Roundup in seven years."

Featuring patented Dual Salt Technology®, Roundup DST's 470g/L formulation has a unique combination of potassium and mono ammonium salts, combined with a surfactant package that partners well with adjuvants, like LI700®.

"Roundup DST is taking performance to a whole new level. Our research and development team have spent the past four years, some 10,000 hours, hard at work to deliver this new formulation," explained Damien.

"Beyond the lab work, the product has been tested in the field with over 50 User Reliability Trials (URTs) conducted across the country with growers, agronomists and distribution partners able to see the results first hand."

The key benefits of Roundup DST include:

- improved performance on hard to kill weeds in difficult conditions
- enhanced compatibility for greater tank mixing flexibility
- improved ease of handling with lower foaming and easier pumping
- faster brownout for quicker results and peace of mind

"It's exciting to see this new development in glyphosate technology delivering improved in-field performance over and above the already impressive Roundup CT benchmark," Damien said.

"The feedback from the URTs supported the key benefits we felt Roundup DST would deliver to Australian growers and ensures we meet the market's needs. Everyone is very impressed with its performance."

Roundup DST is available now.
