

New Product Introduction

Unite® Ultrastick®

Our new 'ultra sticky' 720g/L Chlorothalonil formulation – Unite Ultrastick is now available.

The secret to Unite Ultrastick's super stickability is its innovative surfactant package, developed by Nufarm Australia's formulation team for Australia's tough weather conditions.

Unite Ultrastick's improved sticking and coverage on plant surfaces means even in the worst conditions growers can rest easy knowing their crops will be protected against disease infection.

The new Unite Ultrastick formulation has also gained an important registration for the control of Ascochyta rot disease in processing peas as part of a protectant fungicide program.

Unite Ultrastick is also registered across a wide range of horticultural crops, peanuts and turf and is available in a 10L pack.

For further advice please contact your local distributor or representative from Nufarm. For contact details please refer to the Nufarm Horticulture website
