Workshops for mango growers

AMIA, in conjunction with Nufarm and holding a series of application and adjuvant workshops in key mango production regions. The workshops, to be held from the 7th to the 15th March are being funded by Nufarm and AMIA with assistance from the Federal Government's AusIndustry fund.

Internationally recognised scientist Robyn Gaskin will be the key speaker at each workshop. Robyn has more than 30 years experience in the area of crop protection. She has worked for most of that time at the Crown Research Institute 'Forest Research', based at Rotorua, New Zealand, in the Plant Protection Chemistry group (PPCNZ).

Robyn's extensive experience with the use of adjuvants in horticultural operations has been gained from research projects undertaken on behalf of numerous commercial clients and grower organisations, both local and international. She has worked to improve the efficacy and environmental sustainability of pest and disease management programmes in crops as diverse as potatoes and onions, kiwifruit, wine grapes and pine trees.

Darwin Thursday 10th March 2.00pm

'Bonza Mangoes' Lot 1701 Cain Rd,
Lambells Lagoon
