

**Knockdown weeds and reduce seed set in pastures with  
NEW Weedmaster 490 CT PLUS.**

Cultivating to control weeds can be a major cause of soil degradation and lost production. Weed management with herbicides has proven to be a practical and far less damaging alternative to cultivation.

Now we've added an alternative glyphosate to our broadacre range. Nufarm Weedmaster 490 CT PLUS controls emerged weeds before sowing, and it's stronger with higher levels of surfactant already built-in.

The benefits of Weedmaster 490 CT PLUS include improved uptake by plants, rainfast in 2 hours, and improved compatibility with several soil active herbicides.
