

Elect 750 Fungicide

Elect 750 is our new protectant fungicide that contains 750g/L Chlorothalonil. Many growers will be aware that this fungicide provides excellent broad-spectrum activity on many diseases. Application situations include grapes, peanuts, tobacco potatoes, tomatoes, other vegetable crops, stone fruits and nut crops, turf and lawns.

Elect 750 is available in our unique 10L pack with two equal sized outlets, one for pouring one for breathing. These features promote safer chemical handling - lighter than a 20L pack and less chance of accidental spillage, a problem with smaller outlets on some packs.

Contact your nearest Nufarm representative (see contacts) for more information, or request a copy of our Spectrum Note No. HO-03 by completing details in the feedback section.

Nutril is available in an easy pour 10L pack.
