

Nutril Herbicide For Sugar Cane

Nutril is a selective herbicide that provides fast acting control of hard to kill broadleaf weeds and mature vines in sugarcane.

It contains two active constituents, 2,4-D (577g/L) and loxynil (100g/L).

Nutril is a cost effective and efficient choice when controlling mature vines in an inter-row spray situation. When mixed with diuron, Nutril will aid in the suppression and control of Nutgrass. Nutril is also compatible with several other herbicides.

Sugar cane growers should contact their nearest Nufarm representative (see contacts) for more information, or request a copy of our Spectrum Note No. AG-27 by completing details in the feedback section.

Nutril is available in an easy pour 10L pack.
