Weedone® LV4 EC

SELECTIVE HERBICIDE

Control Weeds with a Low Volatile 2,4-D Formulation.

Weedone® LV4 was the first low volatile 2,4-D ester on the market. Its high quality emulsifiers promote good mixing with all grades of liquid fertilizer and provide weed penetration capabilities for hard-to-control species.

BROAD-SPECTRUM CONTROL WITH TANK MIX OPTIONS

- Low volatile 2,4-D ester formulation
- Broad-spectrum control of broadleaf and woody weeds
- Excellent control as tank-mix
- Can be tank-mixed with Diablo® for complete kochia control
- For wider spectrum control of broadleaf weeds and woody plants tank-mix with Tahoe® 4E

**Weedone® LV4 EC**

**KEY USES**
Fencerows, roadsides, rights-of-way, industrial sites, pasture, rangeland, Conservation Research Program (CRP) land, brush control and forest management

**KEY WEEDS CONTROLLED**
(See product label for complete list)
- Alder
- Alfalfa
- Beggartick
- Bindweed
- Black-eyed Susan
- Box elder
- Carpetweed
- Chicory
- Cockle
- Dogfennel
- Fanweed
- Goldenrod
- Ground ivy
- Henbit
- Horsetail
- Ironweed
- Knotweed
- Kochia
- Lambsquarters
- Mallow
- Mustard
- Nettle
- Pennywort
- Pigweed
- Ragweed
- Russian thistle
- Smartweeds
- Tansy ragwort
- Tarweed
- Thistle
- Toadflax
- Virginia creeper
- Wild garlic
- Wild onion
- Witchweed
- Yellow rock

**APPLICATION RECOMMENDATIONS**

**Non-cropland:** Use 2 to 4.25 pints of product per acre. Apply when most annual broadleaf weeds are still young and growing vigorously. Apply when perennial and biennial weeds are actively growing and near the bud stage, but before they start flowering. For best results on musk thistle and tansy ragwort, treat in rosette stage, before bolting. A second application is usually needed for best results on bindweed, nettle, and thistle. Treat garlic and wild onion in early spring and in fall when they are young and growing actively. Mix 4 pints of this product in 2 quarts of kerosene or diesel oil, then add this mixture to enough water to wet all parts of the foliage. The addition of a wetting agent (spray adjuvant) is suggested. Usually 4 pints per acre will give adequate control.

**Spot treatment in non-crop areas:** To control broadleaf weeds in small areas with a hand or backpack sprayer, use 4 fluid ounces of this product per gallon of water and spray to thoroughly wet all foliage.

**Conservation Reserve Program areas:** To control annual broadleaf weeds, apply when weeds are actively growing. Use 0.5 to 1 pint per acre when weeds are small; use higher rates on older weeds. Excessive injury may result if applied to young grasses with fewer than six leaves or prior to grasses being well established. To control biennial and perennial broadleaf weeds in established grasses, apply at a rate of 2 to 4 pints per acre. Apply to actively growing weeds. Treat when biennial weeds are in the seedling to rosette stage and before flower stalks become apparent. Treat perennial weeds in the bud to bloom stage. **Note:** Suggest at least 2 gallons of water per acre by air and 5 gallons of water per acre by ground.

*See label for complete application rates and recommendations.*

**USE PRECAUTIONS FOR PASTURES AND RANGELAND**

Do not cut forage for hay within 7 days of application.

For susceptible annual and biennial broadleaf weeds use 2 pints per acre per application.

For moderately susceptible biennial and perennial broadleaf weeds use 2 to 4 pints per acre per application.

For difficult to control weeds and woody plants use 4 pints per acre per application.

For spot treatments use 4 pints per acre.

Do not apply more than 4.0 lbs 2,4-D ae per acre per year. Do not apply more than 2 applications per year with a minimum retreatment interval of 30 days.

*See label for complete application precautions.*
