

# Safari® INSECTICIDE

## SCALE CONTROL – ARMORED & SOFT

Safari® 20 SG Insecticide is a super-systemic neonicotinoid that provides excellent control of scale - including many species of armored scale, which are one of the most difficult to control pest groups on landscape ornamentals. Safari also controls many other pests including emerald ash borers, hemlock woolly adelgids, leafminers, mealybugs, fungus gnats and whiteflies.

### SAFARI DELIVERS

- Super-systemic activity = rapid uptake and control
- Broad spectrum and long residual control
- Multiple application methods - foliar spray, soil drench, soil injection and basal trunk spray
- Excellent rotation partner for Distance® Insect Growth Regulator

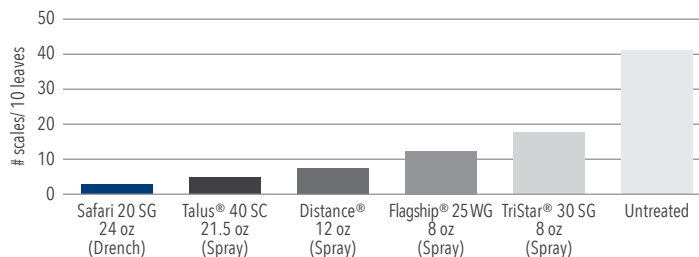

### APPLICATION INFORMATION

INSECT PEST	APPLICATION METHOD	APPLICATION RATE
Scale - Armored & Soft	Foliar Spray	4 - 8 oz/100 gallons
	Soil Drench or Soil Injection	<b>Container:</b> 12 - 24 oz/100 gallons Apply 4 fl oz of finished solution/6" pot <b>Landscape:</b> 3 - 12 grams/indbh (trees) or 3 - 6 grams/foot of height (shrubs)
	Basal Trunk Spray	12 oz/gallon Spray lower five feet of trunk to runoff

12 grams Safari 20 SG = 5 teaspoons, indbh = inches of trunk diameter at breast height

### EUONYMUS SCALE CONTROL - SPINDLE TREE (CONTAINER)

Safari delivers excellent scale control

14 days after application, Applied May 6, Dr. Steven Frank, North Carolina State University
