

Press Release

23rd November 2007

Joules is back

Joules, containing chlorothalonil will once again be available from Nufarm this spring. Last year, Nufarm in collaboration with the University of Nottingham and Harper Adams University College carried out extensive work on *Septoria tritici* sensitivity to triazoles. Laboratory studies show a major reduction in the sensitivity of *Septoria tritici* to triazole type fungicides. Whilst older triazole chemistry tended to fare worse than newer products, all triazoles tested were showing this trend

Chlorothalonil has no known resistance problems and remains a valuable component of any winter wheat fungicide programme

Joules has over 20 crops on the label including wheat, barley potatoes, field beans, brassicae and onions

Joules is a trademark of Nufarm

Always read the label: use pesticides safely
